**ACKNOWLEDGEMENT OF SELF REGENERATING
WATER SOFTENER REGULATIONS**

Self-regenerating water softeners deposit salts into the District's wastewater. High salt content can be harmful to the environment, making groundwater unsafe to drink and use for crop irrigation.

In order to reduce the amount of salts entering the District's wastewater, the District passed Ordinance No. 13-79 prohibiting the installation of self regenerating water softeners and regulating previously installed self regenerating water softeners. Specifically, existing self regenerating water softeners must:

1. be set at a salt efficiency rating of no less than 2,900 grains of hardness removed per pound of salt used in regeneration when regeneration is initiated with clock controls or manually initiated controls, or shall have regenerations initiated with demand devices; and
2. plumbed to hook up to hot water only; and
3. shall not treat water that is used for landscape irrigation.

I _____, agree to abide by the District's self regenerating water softener regulations. I understand that a violation of Ordinance No. 13-79 constitutes a misdemeanor.
